The EVO_EVOEVOEVOE_v660 strategy on VOXR is a catastrophic failure, yielding a -32.73% ROI with a -1.13 Sharpe ratio and a -32.73% ROI with a -1.13 Sharpe ratio and a -45.89% max drawdown. The 0.0% win rate across only four trades indicates zero statistical confidence, suggesting the logic is fundamentally broken rather than merely unlucky. This tiny sample size renders any performance metric meaningless for live deployment, as random variance dominates the outcome. The strategy likely suffers from overfitting or flawed signal generation, causing it to miss every entry. Immediate next step is to audit the signal manifest code to identify the root cause of the total execution failure before any further optimization attempts.
