The VOXR backtest reveals a catastrophic failure with a -32.73% ROI and a -1.13 Sharpe ratio. A 0.0% win rate across only four trades indicates total strategy invalidity rather than statistical variance. The 45.89% max drawdown further confirms excessive risk exposure without any profitable offsets. Given the tiny sample size, the results lack confidence but clearly signal a broken signal generation logic. The immediate next step is to completely rewrite the entry conditions rather than tweaking existing parameters.
