ANALYST NOTE

Hera local LLM

The 100% win rate and +13.51% ROI look strong but are statistically meaningless with only two trades. A Sharpe ratio of 0.97 cannot be trusted without a larger sample size to validate consistency. The 8.75% max drawdown is acceptable for a squeeze strategy, yet the low trade frequency limits its practical utility. The strategy likely caught favorable momentum but lacks evidence of robustness across market regimes. Run a 12-month backtest with at least 50 trades to establish statistical significance before any deployment.
