ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v2392 backtest on LPG shows a 40.41% ROI with a 1.10 Sharpe, yet the 21.82% drawdown and only three trades reveal severe overfitting risks. A win rate of 66.7% is statistically meaningless with such a limited sample size, suggesting the edge is likely noise rather than a robust alpha. The strategy failed to capture volatility effectively without generating sufficient trade frequency to smooth out equity curve anomalies. Next, we must widen the parameter grid and run a walk-forward analysis to validate if these metrics hold across different market regimes.
