ANALYST NOTE

Hera local LLM

This backtest of the GG5 Stochastic Oversold strategy on DOGE/USD failed completely, producing zero winning trades and a maximum drawdown exceeding 20%. The sample size of only two trades is statistically insignificant, rendering the negative Sharpe ratio of -0.83 unreliable for any robust performance conclusion. The strategy likely suffered from overfitting to historical noise or entered a downtrend where mean reversion logic is fundamentally flawed. We must increase the trade count through broader parameter sweeps or longer timeframes before attempting live deployment.
