ANALYST NOTE

Hera local LLM

The EVO_EVOVELOCIT_v1517 strategy failed on RDN, posting a negative 5.59 percent return and a 14.78 percent maximum drawdown. The zero percent win rate across only three trades indicates severe signal failure, with no statistical confidence due to the tiny sample size. This poor performance suggests the velocity logic is misaligned with RDN's current market regime. The next step is to re-evaluate the entry filters against a larger historical dataset to identify why the signals consistently missed. This analysis is for educational purposes only.
