ANALYST NOTE

Hera local LLM

The BULL Zen Mean Reversion test shows a +19.28% ROI, yet the 50% win rate and single-digit trade count indicate severe statistical insignificance. A 22.22% drawdown with only two trades suggests the strategy lacks robustness and is highly sensitive to volatility spikes. The low Sharpe ratio of 0.82 confirms that returns are not sufficiently risk-adjusted for institutional deployment. We must expand the sample size or introduce tighter volatility filters to validate this approach.
