ANALYST NOTE

Hera local LLM

The NBTB GG4_Bollinger_Squeeze backtest shows a perfect 100% win rate and strong risk-adjusted returns, but this result is statistically insignificant due to only two trades executed. A flawless record on such a small sample size likely reflects a specific market regime rather than robust strategy validity. The 5.37% maximum drawdown is acceptable, yet we cannot generalize the 1.55 Sharpe ratio without more data points. I recommend running a walk-forward analysis or stress-testing the strategy against different market volatility regimes to validate its edge before live deployment.
