ANALYST NOTE

Hera local LLM

The LPG backtest for EVO_EVOEVOE_v1720 shows a 40.41% ROI with a 66.7% win rate, yet the 21.82% drawdown is alarming given the low trade count. Only three trades executed suggest insufficient sample size to validate the strategy's statistical robustness or risk profile. While the positive Sharpe ratio indicates good risk-adjusted returns in this simulation, the narrow dataset prevents confidence in the model's generalizability. We must increase the backtest window or adjust parameters to generate more trade data before deploying live capital.
