ANALYST NOTE

Hera local LLM

The LPG backtest for EVO_EVOEVOE_v1774 shows a +40% return with a 66% win rate, yet the shallow sample of three trades renders statistical significance impossible. The 21.8% maximum drawdown highlights severe volatility exposure that is not mitigated by the current risk parameters. While the Sharpe ratio of 1.10 suggests positive risk-adjusted returns, the lack of trade diversity prevents any reliable inference of strategy robustness. A concrete next step is to expand the backtest window or adjust entry filters to generate a larger dataset before deployment.
