ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v1778 strategy on LPG delivered a 40.41% ROI with a 66.7% win rate, yet the statistical significance is critically low due to only three trades. A 21.82% maximum drawdown suggests high volatility exposure that the sample size cannot yet validate, while a Sharpe ratio of 1.10 indicates moderate risk-adjusted returns. The performance remains largely anecdotal, as three data points are insufficient to confirm robust trend-following mechanics or filter reliability. Before deploying live capital, the team must expand the test period to capture multiple market cycles and verify consistency under varying conditions.
