ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v1816 strategy on ASC generated an 18.35% return, yet the 17.18% drawdown and low Sharpe of 0.82 reveal excessive volatility risk. With only three trades, the 66.7% win rate lacks statistical significance and could be purely random noise. The sample size is insufficient to validate the edge, making the results unreliable for institutional deployment. We must run a longer backtest or walk-forward analysis to confirm robustness before live execution.
