ANALYST NOTE

Hera local LLM

The +18.35% return and 66.7% win rate suggest a viable edge for ASC, but the 0.82 Sharpe ratio is moderate and the 17.18% drawdown indicates high volatility. Critically, only three trades provide no statistical confidence, making the results likely noise rather than signal. The small sample size renders the win rate meaningless for risk assessment. You must expand the backtest to at least fifty trades to establish a robust baseline. This larger dataset will reveal if the strategy's edge persists across different market regimes.
