ANALYST NOTE

Hera local LLM

The COP GG4_Bollinger_Squeeze backtest shows a perfect 100% win rate and a +46.48% ROI, yet the statistical significance is critically low due to only two trades. Such a small sample size cannot validate the 2.05 Sharpe ratio or the 12.87% max drawdown as robust performance metrics. The strategy likely captured a specific market anomaly rather than a repeatable edge, making the results highly unreliable for live deployment. A concrete next step is to run a forward test on a rolling window of 30 days to gather enough trades for meaningful statistical confidence.
