ANALYST NOTE

Hera local LLM

The TRUMP/USD Zen Mean Reversion backtest failed completely with zero wins and a negative Sharpe ratio of -1.72, indicating the strategy cannot capture upside in this volatile asset. Statistical significance is impossible to determine with only two trades, making the -9.90% loss a high-variance outlier rather than a reliable pattern. The strategy likely suffered from overfitting to noise or entering positions against a dominant trend, causing immediate drawdown without recovery. Next, you must run a longer backtest on BTC/USDT to verify if the mean reversion logic holds under standard market conditions before applying it to political tickers.
