ANALYST NOTE

Hera local LLM

The +11.00% return and 66.7% win rate show initial promise, but the 11.43% drawdown is high relative to the gains. With only three trades, the 0.85 Sharpe ratio lacks statistical significance and does not prove robustness. This small sample size makes the results highly susceptible to random variance rather than genuine alpha. The strategy needs a much larger trade history to validate its edge and risk management.
