ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v2258 strategy on ASC generated an 18.35% return with a 66.7% win rate, yet the sample of only three trades renders the 0.82 Sharpe ratio statistically insignificant. While the strategy successfully navigated initial volatility, a 17.18% maximum drawdown reveals substantial risk exposure that is not yet validated by sufficient trading frequency. Such a low trade count fails to confirm robustness or optimize risk-adjusted performance metrics for live deployment. The next logical step is to expand the backtest window or adjust entry filters to generate a minimum of fifty trades before live implementation.
