ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v2349 strategy on GC=F delivered a +29.90% return with a perfect 100% win rate, yet this result is statistically meaningless due to only two trades. A 17.75% maximum drawdown combined with a Sharpe ratio of 1.34 suggests high volatility exposure rather than consistent alpha generation. The sample size is insufficient to validate the robustness of the entry logic or confirm true risk-adjusted performance. We must increase the trade count or adjust parameters to filter out outlier luck before deploying real capital.
