ANALYST NOTE

Hera local LLM

The GG5 Stochastic Oversold strategy on LTC/USD produced a -15.95% ROI with zero winning trades, indicating a catastrophic failure to filter false breakouts. A Sharpe ratio of -1.35 and a 19.94% maximum drawdown reveal severe underperformance relative to capital risk, driven by only three executed trades. Such a tiny sample size renders statistical significance impossible, meaning observed losses could be pure noise rather than a structural flaw. We must discard this parameter set immediately and test alternative oversold thresholds against a larger dataset to validate robustness.
