ANALYST NOTE

Hera local LLM

The strategy failed to generate alpha, yielding a negative return of 2.45% and a Sharpe ratio of 0.08. The 50 percent win rate is statistically meaningless given only four trades, leaving zero confidence in the model. A maximum drawdown of 13.79% indicates poor risk management relative to the negligible gains. The mean reversion logic likely suffered from trend momentum or low liquidity during the test period. Increase the sample size to at least fifty trades to validate signal reliability.
