ANALYST NOTE

Hera local LLM

The backtest for VOXR shows a catastrophic loss of 32.73% with a zero win rate across only four trades. The negative Sharpe ratio of -1.13 and severe 45.89% drawdown indicate consistent downside risk without any upside capture. With such a tiny sample size, statistical significance is nonexistent, making this result unreliable for strategy validation. The core failure is the complete absence of profitable signals, suggesting the logic does not fit this asset. The immediate next step is to conduct a detailed review of why every single trade resulted in a loss before considering any further deployment.
