ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v2165 backtest on LPG shows strong returns, yet the strategy is statistically unreliable due to only three total trades. A 21.82% maximum drawdown indicates significant volatility exposure that requires immediate stress testing across multiple market regimes. While the 1.10 Sharpe ratio suggests favorable risk-adjusted returns, such a small sample size prevents any meaningful confidence in the win rate. You must run an out-of-sample forward test to validate performance before committing capital.
