ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v125 strategy on VOXR failed decisively, delivering a negative ROI of -2.01% with a Sharpe ratio of -0.05. Only three trades were executed, yielding a win rate of 33.3% and exposing the portfolio to an 11.32% maximum drawdown. Such a tiny sample size renders the results statistically insignificant, meaning this poor performance could easily be random noise rather than a systemic flaw. We cannot draw reliable conclusions about the strategy's viability without significantly increasing the data horizon. The immediate next step is to run a fresh backtest over a longer period to determine if this underperformance persists across more market cycles.
