ANALYST NOTE

Hera local LLM

The EVO_WEBIDEA_v63 strategy on VOXR failed to generate alpha, delivering a negative ROI and a negative Sharpe ratio that indicates poor risk-adjusted performance. With only three executed trades, the statistical sample size is insufficient to draw confident conclusions about the strategy's true edge or stability. The maximum drawdown of 11.32% suggests significant exposure to volatility that the current logic failed to filter effectively. Increasing the trade count through a broader parameter sweep on entry thresholds is the necessary next step to validate the approach.
