ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v1748 strategy on VOXR failed to generate alpha, delivering a -2.01% ROI and a negative Sharpe ratio of -0.05. With only three trades executed, the 33.3% win rate and 11.32% maximum drawdown lack statistical significance and cannot validate the approach. The sample size is too small to distinguish between random noise and genuine structural flaws in the entry logic. Re-running the test on a 6-month interval with at least 100 trades is required to confirm if the system is fundamentally broken. This current result should be treated as an anomaly rather than a confirmed strategy failure.
