ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v190 strategy on LPG delivered a +42.10% return with a 1.14 Sharpe ratio, yet the 21.82% drawdown and only three trades reveal severe statistical fragility. High win rate metrics are misleading given the minimal sample size, offering zero confidence for live deployment. The strategy likely captured a specific short-term mean reversion without adequate protection against regime shifts. We must increase trade frequency via parameter tuning and validate performance across multiple market regimes before committing capital.
