ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v205 backtest on LPG generated a +42.10% return, yet the statistical significance is critically low given only three total trades executed. While the 1.14 Sharpe ratio and 66.7% win rate suggest effective risk-adjusted performance, the max drawdown of 21.82% indicates high volatility exposure not yet smoothed by sample size. This narrow dataset fails to confirm robustness against varied market regimes, making the high return an outlier rather than a systemic edge. We must increase the backtest horizon or adjust entry thresholds to gather sufficient trade data before deploying live capital.
