ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v1469 backtest on AMD shows a theoretical 87.88% gain driven by a single trade, rendering the 50% win rate and 1.61 Sharpe ratio statistically meaningless. With only two trades executed, the maximum drawdown of 26.05% masks extreme volatility and offers no insight into regime stability. This sample size is insufficient to validate the strategy, as the results are likely noise rather than a reliable alpha signal. We must expand the test horizon to at least 100 trades before deploying capital. Further parameter optimization is required to verify consistent performance across different market conditions.
