ANALYST NOTE

Hera local LLM

The LPG backtest for EVO_GG1RSISNIP_v300 shows a 42.1% ROI with a 66.7% win rate, yet the 21.8% drawdown and three total trades severely limit statistical confidence in this sample. The 1.14 Sharpe ratio suggests reasonable risk-adjusted returns, but high volatility relative to trade frequency indicates overfitting or insufficient data. Robustness requires expanding the test period to capture different market regimes and validate performance outside the current sample. A concrete next step is running a walk-forward analysis across 50% of the available historical data to confirm strategy stability.
