ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOG_v484 strategy on LPG delivered a 42.1% return with a 66.7% win rate, yet the 21.8% drawdown and low Sharpe of 1.14 reveal excessive volatility risk. With only three trades executed, the statistical significance is negligible, making the performance highly sensitive to single-price swings rather than robust alpha. While entry timing appears effective, the lack of trade diversity suggests the signal logic is overfitted to specific market noise rather than capturing a durable edge. The next step is to expand the backtest window and increase trade count by lowering capital or widening stop-loss thresholds to validate consistency. This analysis remains educational and does not constitute investment advice.
