ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOG_v486 strategy on VOXR failed to generate alpha, recording a negative ROI of -2.01% and a loss-making Sharpe ratio of -0.05. With only three trades, the sample size is insufficient to establish statistical significance, rendering the 33.3% win rate and 11.32% drawdown statistically unreliable indicators of future performance. The data suggests the entry logic lacks robustness in the current market regime, likely due to a lack of effective filtering or overfitting to noise. We must avoid deploying capital based on this minimal dataset and instead require a reparameterization of the signal thresholds to improve trade frequency and consistency.
