ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v520 backtest on LPG generated a 42.10% return with a 1.14 Sharpe ratio, yet the 21.82% drawdown and single digit trade count of three severely limit statistical confidence. A 66.7% win rate is misleading without volume, as the high variance suggests the strategy is overfitting to specific noise rather than capturing a robust trend. The lack of diversification and insufficient sample size prevent reliable risk assessment for live deployment. We must run a multi-year walk-forward test with stricter equity filters to validate whether the alpha persists beyond this narrow dataset.
