ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v535 backtest on RDN failed catastrophically, returning a -5.59% loss with a 0% win rate and a negative Sharpe ratio of -0.31. With only three trades executed, the statistical significance is negligible, meaning the maximum drawdown of 14.78% likely reflects random noise rather than a systematic flaw. The strategy lacks any profitable edge in the current market regime, suggesting the signal logic is either misaligned with RDN's volatility or fundamentally broken. We must re-evaluate the entry filters and reduce position sizing to avoid overfitting to small sample sizes before redeploying capital.
