ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v834 strategy generated a 42.10% ROI on LPG with a 66.7% win rate, yet the 21.82% drawdown and low Sharpe ratio of 1.14 indicate high volatility relative to returns. With only three executed trades, the statistical significance is negligible, making the positive performance potentially a result of overfitting rather than a robust edge. The strategy lacks sufficient trade frequency to validate its risk-adjusted metrics under varied market conditions. We must expand the sample size by running a walk-forward analysis on a longer historical period to confirm stability before deployment.
