ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v611 backtest on VOXR yielded a negative return of -2.01% with a poor 33.3% win rate and a maximum drawdown of 11.32% across just three trades. Such a sparse sample size precludes any statistical confidence in the strategy's robustness or its negative Sharpe ratio of -0.05. The limited trade count suggests the entry logic fails to trigger in the current market regime or suffers from overfitting. Next, increase the lookback parameters to generate a larger trade sample or switch to a different interval to validate the signal reliability.
