ANALYST NOTE

Hera local LLM

The EVO_EVOEVOE_v830 strategy on NVDA failed to generate value, delivering a negative ROI of -0.63% and a critically low Sharpe ratio of 0.09. With only three total trades, the results lack statistical significance, meaning the observed 33.3% win rate and 23.49% drawdown are unreliable indicators of future performance. The bot appears overfitted to noise rather than capturing genuine market alpha, leading to inefficient capital allocation. A robust next step is to increase the simulation horizon or adjust entry filters to ensure a minimum of 50 trades before re-evaluating viability. Investors should treat these metrics as exploratory data rather than a signal for live deployment.
