ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v1842 backtest on BTC-USD shows a 11.23% loss with a -0.69 Sharpe ratio, driven by a 24.12% drawdown across only four trades. A 25% win rate indicates the signal logic failed to capture meaningful alpha in this environment, likely due to overfitting or poor regime adaptation. With such a small sample size, statistical confidence is negligible, making the negative ROI unreliable as a definitive performance metric. The primary next step is to expand the dataset to include multiple market cycles and retest the strategy to validate its robustness.
