ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v629 strategy on VOXR failed to generate alpha, recording a -2.01% return with a negative Sharpe ratio of -0.05. Only three trades occurred, yielding a 33.3% win rate and an 11.32% maximum drawdown, which indicates severe overfitting to a tiny sample. Such a limited dataset lacks statistical significance and renders any observed patterns unreliable for live deployment. The strategy requires immediate parameter re-optimization or a complete structural review before further testing. No further capital should be allocated to this approach until a robust sample size is achieved.
