ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v645 strategy on LPG generated a robust 42.10% return with a Sharpe ratio of 1.14, yet the 21.82% maximum drawdown and mere three executed trades severely limit statistical confidence in this sample. While the 66.7% win rate suggests effective signal generation, the narrow dataset prevents validation of the strategy's resilience across different market regimes. This performance could easily be a statistical outlier rather than a systemic edge, risking significant loss if applied blindly to live capital. The immediate next step is to expand the backtest horizon or adjust parameters to generate a larger sample size before deployment.
