ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v856 backtest on RDN failed catastrophically with a -5.59% ROI and zero winning trades out of only three executions. A Sharpe ratio of -0.31 combined with a 14.78% maximum drawdown indicates severe underperformance relative to risk, likely due to insufficient sample size for statistical validation. The strategy appears overfitted or misaligned with current volatility, as such a small trade count yields no reliable signal for institutional deployment. Immediate next steps involve parameter optimization on broader historical datasets or halting deployment until robustness is proven.
