ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v711 strategy shows an 18.35% return on ASC with a 66.7% win rate, yet the 17.18% drawdown reveals excessive volatility. Three trades are insufficient to confirm statistical significance, meaning this alpha could easily be noise rather than a robust edge. The low Sharpe ratio of 0.82 indicates returns are not adequately compensated for the risk taken during this sample. You must expand the backtest window or adjust entry filters to generate enough data points for reliable validation.
