ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v741 strategy on LPG delivered a +42.10% return, yet the statistical significance is negligible given only three trades. While the 1.14 Sharpe ratio and 66.7% win rate appear robust, they are likely overfit noise rather than predictive edge. The substantial 21.82% maximum drawdown indicates high volatility exposure that a small sample cannot reliably quantify. You must expand the test on at least 500 trades to validate this alpha before deploying capital.
