ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v992 strategy shows an 18.35% return on ASC with a 66.7% win rate, yet the 17.18% drawdown reveals significant volatility risk. Only three trades occurred, which statistically limits confidence and makes the positive Sharpe ratio of 0.82 unreliable. The performance likely stems from a single profitable position rather than robust logic. You must increase trade frequency via parameter tuning or broader market coverage before deployment.
