

Backtest #48298 · VOXR · EVO_GG1RSISNIP_v1021

ROI	Sharpe	Win Rate	Max Drawdown
-2.01%	-0.05	33.3%	-11.32%

EQUITY CURVE202 sessions · starting at \$9997.00

ANALYST NOTE

Hera local LLM

The backtest on VOXR indicates a failing strategy with a negative ROI and a Sharpe ratio of -0.05, suggesting the model generates more losses than gains. With only three trades executed, the statistical confidence is negligible, making the 33.3% win rate and 11.32% drawdown statistically insignificant rather than reflective of true performance. The strategy lacks robustness for live deployment due to this severe data scarcity and lack of risk-adjusted returns. A concrete next step is to run a longer backtest period or reduce the trade frequency to gather sufficient data for a valid statistical evaluation. Until the sample size increases, this configuration should remain inactive to prevent capital erosion.
