ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v1071 backtest on RDN failed completely with zero winning trades and a negative Sharpe ratio. Such a 0% win rate across only three trades provides no statistical confidence and likely reflects an overfit signal or extreme market noise. The 14.78% drawdown indicates poor risk control relative to the small sample size. Immediate next step is to stress-test the entry logic against different volatility regimes before any live deployment.
