ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v1079 strategy on PLMR generated a marginal 0.43% ROI with a 14.67% peak drawdown after only two trades, yielding a Sharpe ratio of 0.14. A 50% win rate with such a low trade count provides insufficient statistical power to validate the strategy's edge or reliability. The narrow sample size prevents any meaningful assessment of risk-adjusted returns or consistency under varying market regimes. We must expand the backtest horizon with more historical data to determine if these results are anomalous or indicative of future performance.
