ANALYST NOTE

Hera local LLM

The EVO_EVOEVOE_v2415 strategy on gold futures (GC=F) failed catastrophically, posting a -4.00% ROI with a negative Sharpe ratio of -0.36. A mere three trades and a 33.3% win rate render any statistical inference meaningless; the results are likely noise rather than a signal. The 12.60% maximum drawdown indicates a severe lack of risk controls that allowed a small sample size to erase capital. Given the extreme underperformance, immediate parameter optimization or strategy deletion is required before capital is risked again.
