ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v766 strategy on LPG generated a 42.10% ROI with a 66.7% win rate, yet the 21.82% maximum drawdown and Sharpe ratio of 1.14 reveal high volatility and inconsistent risk-adjusted returns. Such a low trade count of only three executions severely limits statistical confidence, making the performance highly sensitive to a single outlier rather than a robust signal. While the strategy captured significant upside, the lack of trade frequency suggests the entry logic is too restrictive to generate reliable alpha in current market conditions. A practical next step is to widen the entry filters or adjust the lookback period to increase trade frequency and validate the strategy's consistency over a larger sample.
