ANALYST NOTE

Hera local LLM

The EVO_EVOWEBIDEA_v373 strategy on gold futures underperformed significantly, posting negative returns and a poor Sharpe ratio of -0.36. With only three executed trades, the statistical sample is too small to derive meaningful alpha or generalize the edge. The 12.60% maximum drawdown indicates high volatility exposure that likely exceeded the strategy's risk tolerance during this specific period. A longer backtest horizon with more trades is required to validate the logic and ensure the results are not merely noise.
