ANALYST NOTEHera local LLM

The EVO_WEBIDEA_v444 strategy on AAPL shows positive capital growth, yet the 0.87 Sharpe ratio and exact 50% win rate suggest the edge is not statistically significant. With only two trades, the maximum drawdown of 11.50% and the final ROI cannot be trusted as reliable performance metrics. The sample size is too small to confirm the strategy's robustness against market variance or to validate the risk-adjusted returns. I recommend running a longer backtest with increased transaction costs and a wider lookback period to assess parameter stability before live deployment.
